How to Power the Smartcell Universal Charger

Your Smartcell Universal Charger can be powered one of two different ways:

1. Using the Foldable Plug via a Wall Outlet -100-240V
2. Using the micro USB input via a micro USB cable connected to any powered USB port (computer, laptop, car port, etc.) - 5V/600mA

How to Charge a Battery via the Adjustable Battery Dock

1. Adjust the charger dock to accommodate your battery size (up to 2.7 inch in length) by rotating the cassette vertically or horizontally.

2 Align the chargers two floating pins to the corresponding positive (+) and negative (-) contacts of the battery. When sliding the battery into the charger, the charger will automatically detect polarity and will charge accordingly.

3 If the battery is correctly inserted, the LED Indicator will shine RED to indicate active charging; BLUE signifies a full charge.

Note: When the Charger is not powered (plugged in, or powered by USB), the LED Indicator will shine RED for 5 seconds, and then turn off, letting you know that the battery has been inserted correctly.

How to Charge a Device via the USB Port

1. Locate the USB output port of the Universal Charger and plug in a USB power wire (not included). Insert the remaining end into the input port of your device. Power the Charger.
2. The LED Indicator will remain BLUE unless you are charging a battery in the adjustable dock simultaneously (in which case, the LED Indicator will turn RED).

Precautions

To ensure the safe use of this device, please:
- Handle gently: Do not disassemble, crush, or shake while in use.
- Store and use at normal temperatures in a dry environment.
- Keep away from flammable and explosive materials.

Note: The Smartcell Universal Charger accommodates batteries up to 2.7 inches in length. Please ensure that the charging contacts of the battery are located on either the top or bottom. The Charger does not support any batteries with contacts located on the front or back.
